Application for Sr. Software Engineer – Advanced Technology Development

Dear Hiring Team,

Align Technology's Advanced Technology Development team caught my attention for a specific reason: you use **Claude Code** daily and are actively building AI-powered product features. So do I — and I have strong opinions about how AI should reshape the software development lifecycle.

With over 15 years of professional software engineering experience, I bring a proven track record in architecting and delivering complex systems at enterprise scale. At Continental, I designed and owned an ecosystem of **13 integrated services** deployed globally across R&D; sites — including a full migration to **AWS**. At Avanade, I worked in a security-critical environment under Germany's Federal Criminal Police Office (BKA), where architectural decisions carried real-world consequences. I understand system design, performance optimization, and cross-functional delivery at a level that translates directly to the complexity of a product used by thousands of orthodontists worldwide.

I will be transparent: React, Three.js, and WebGL are not my current primary stack. My frontend experience sits in **C#, ASP.NET Core, and Web APIs**. However, I am an experienced engineer who learns new stacks methodically — and with Claude Code as a daily development tool, the learning curve on a modern React/Three.js codebase is a very different proposition than it was five years ago. I have already built a full Microservices platform on **Azure AKS** using GitHub Actions, Helm, and Prometheus, which demonstrates my ability to take ownership of unfamiliar stacks end-to-end.

What I bring that most candidates cannot: I use AI-assisted development tools — including **Claude Code** — as a genuine part of my workflow, not as a novelty. I can speak concretely about how AI changes code review preparation, test generation, refactoring velocity, and architectural decision-making. If you want someone who will help define and evolve your AI-augmented development practices, that is a conversation I am ready to have.

Darmstadt is 25 minutes from where I live. I am immediately available.

I would welcome the opportunity to show you concretely how I approach complex engineering problems — and how I work alongside AI to solve them faster.

Kind regards,

Sheikh Md Neyamat Ullah
